Product Code . DS-DASGAGM-10468

Checking Standards for Gloss Meters

Description

Checking Standards for Gloss Meters

Description:-

Checking standards control the performance of the gloss meter and the surface condition of the calibration tile to guarantee accurate and repeatable measurements.

Easy-Link software helps document measurement results. All the data is summarized in one easy-to-read report: gloss, thickness, color, and specific product information. It provides easy and direct data transfer from the instrument to Excel. QC templates prepared in Excel allow you to create professional QC reports.
