Standard Ultrasonic Coating Thickness Gauges for Non-Metals

Description

Standard Ultrasonic Coating Thickness Gauges for Non-Metals

Description:-

The standard ultrasonic coating thickness gauges non-destructively measure the thickness of coatings on non-metal substrates including wood, plastic, composites, and more. They also measure the total thickness of a coating system.

- Ready to measure - no calibration adjustment required to measure most coatings
- Solvent, acid, oil, water and dust resistant
- High contrast backlit display for bright or dark environments
- Internal memory for 250 readings in a single batch to be view or downloaded
- Statistics mode continuously displays average, standard deviation, and number of readings while measuring.
