Multifunction Meter

Description

Multifunction Meter

Description:-

This Multifunction Meter combines an anemometer, thermometer, hygrometer, and light meter into one instrument, saving space and simplifying environmental monitoring. The display orientation flips automatically depending on parameter being measured. Bracket located on the back of the meter mounts to a tripod (order separately) for long-term min/max sampling—just disable the auto power-off function. Data Hold and Min/Max functions save readings for later analysis.

Key Features:

- Measures air velocity and flow, ambient and surface temperature, humidity, wet bulb, dew point, heat index, windchill, and light.
 - Large backlit LCD is easy to see in dimly lit areas
 - Precision photodiode with cosine and color correction ensures accuracy
 - Built-in miniature vane with low-friction ball bearing provides reliable measurements.
 - Internal sensor measures ambient temperature; type K thermocouple measures surface temperatures.
