

Product Code . DS-HP-10713

Thermohygrometer with Heat Stress Index

Description

Thermohygrometer with Heat Stress Index

Description:-

Meter displays relative humidity, temperature, heat index, and wet bulb globe temperature. The globe monitors the effects of direct solar radiation on an exposed surface. The heat stress index measures how hot it really feels when humidity is combined with temperature, air movement and WBGT. A WBGT reading is produced through the use of a unique black globe on top of the meter. An in/out function displays the WBGT value with or without direct sun exposure. Formulates the effects of temperature, humidity and sunlight to develop a heat index reading. Small, handy and easy to operate.
